### **DETAILED ACTION**

Claims 1-22 are pending in this application.

#### ***Election/Restrictions***

This application contains claims directed to the following groups of patentably distinct species of the claimed invention:

- i. an oligonucleotide containing no CpG motifs
- ii. an isolated nucleic acid vector without a gene insert

The species are independent or distinct because each species of nucleic acid sequence has different structural, chemical, and functional properties. For example, an oligonucleotide containing no CpG motifs, and a nucleic acid vector without a gene are unrelated in structure and function. An oligonucleotide may be single stranded, or serve as an antisense molecule. Further, a vector comprises numerous different elements capable of directing transcription of operably linked sequences. Moreover, a vector may contain CpG motifs. As such, the search for one species is not coextensive with the search for the other species and it would therefore place an undue burden on the examiner to search and examine all species together.

Applicant is required under 35 U.S.C. §121 to elect a single disclosed species for each of the groups above, for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1 and 13 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1633

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, fall into different statutory classes of invention, and are separately classified and searched, and/or because of the patentably distinct species are listed above, it would be unduly burdensome for the examiner to search and examine all of the subject matter being sought in the presently pending claims, and thus, restriction for examination purposes as indicated is proper.

Applicant is advised that the response for this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
